Professional Summary

Senior Full-Stack Engineer with 10+ years of experience building digital products that bridge complex data and intuitive user experiences. My career spans a decade of architecting robust web systems across healthcare, fintech, and transportation, now specializing in the intersection of Full-Stack development and AI automation.

I am currently leveraging **React 19** and **Next.js 15** to optimize performance at Yeyro, where I manage an AI-integrated insight platform. My recent work focuses on designing agentic systems—utilizing Claude Code to build autonomous software that intelligently acts on real-time data to solve high-stakes problems.

Skills

- **Full-Stack AI:** Agentic System Design, Claude Code, AI Data Integration.
- **Front End Development:** JavaScript, TypeScript, React19, Redux, Next.js (App Router), Angular
- **Back End Development:** NodeJS, Express, MongoDB, SQL, AWS,
- **Testing Frameworks:** React Testing Library, Jest, Karma, Jasmine, Playwright
- **UI Libraries:** Material UI, Bootstrap, Tailwind, CSS modules, Headless UI
- **Cloud & Services:** Firebase, Twilio, Vonage, Pub Nub, Stripe
- **Collaboration:** JIRA, Confluence, MS Teams, Slack, Figma, Miro, Notion
- **Tools:** Version Control (Git, Bitbucket), CI/CD (Jenkins)

Work Experience

Yeyro Pty. Ltd. | Full-Stack Developer - AI Assisted Engineering | Melbourne

Jul 2024 - Present

Yeyro is an AI-powered wearables wellness platform that empowers individuals, families, and communities to understand and proactively manage their health, fitness, and well-being through AI insights and universal wearable integration.

- **Developed high-performance React 19 frontends** focused on the visualization of AI-generated datasets for enterprise management.
- Built a Node.js backend for health data processing, ensuring efficient data flow with **MongoDB and AWS**
- **Engineered a real-time notification engine** using AWS SQS and Web Sockets to deliver proactive insights to the end-user.
- **Designing and prototyping an agentic system** to automate data processing and user-feedback loops using **Claude Code** and proactive automation workflows.

Education

B. Tech, Information Technology - First Class Honours, Govt. Engineering College, Ajmer, India

Multiplier Award

Daffodil Software, Gurugram, India, 2018

Merit Award

Top scorer among all engineering streams.

Govt. Engineering College, Ajmer, India, 2015

Competencies

JavaScript (*Expert*)

React (*Expert*)

Angular (*Expert*)

Typescript (*Experienced*)

HTML5, CSS (*Expert*)

TDD (*Skilful*)

NodeJS, Express (*Skilful*)

RXJS (*Experienced*)

Redux (*Expert*)

AI Assisted Engineering

Daffodil Software Pvt Ltd | Full-Stack Developer | Gurugram, India

Jun 2015 - Jun 2024

Daffodil Software Pvt Ltd is an IT services provider specializing in software engineering and offering a range of services, including custom application development and cloud solutions.

Responsibilities:

- Developed front-end architecture with Angular/ReactJS
- Integrated with REST APIs across various technologies (Node, C#, Java, .NET)
- Collaborated with cross-functional teams (UI/UX, back-end) to deliver efficient, high-quality products
- Designed/implemented scalable back-end logic for APIs/microservices using NodeJS
- Mentored junior developers (code reviews, pair programming), fostering knowledge sharing and team growth
- Implemented best practices for coding, testing, and documentation to ensure code quality
- Practiced result-driven processes (Agile, SDLC), ensuring project execution and delivery

Daffodil Software | Key Projects

- **Exly:** This platform is a website creation tool that helps fitness coaches, dancers, business consultants, tarot card readers, and digital marketers manage and grow their businesses.
 - Users can create customized web pages to schedule classes, book appointments, create courses, and process payments
 - Worked on **front-end development** utilizing **React, Next.JS, and MUI**
 - Integrated **React-Admin, Storybook, and Rich Text Editor** for managing components and customizations
- **Denso E-Audit:** Denso Corporation, a key player in the automobile industry, transitioned from a cumbersome paper-based auditing process to an E-Audit system. This allows auditors to schedule audits, connect via video calls, record evidence, and efficiently update evaluation statuses.
 - Worked as a full-stack developer, using **ReactJS, NodeJS, MongoDB, Twilio, and AWS**
 - Video **call** integration using **Twilio**, and evidence upload during Remote/F2F Audits
- **HealTheia:** HealTheia is a telemedicine platform that offers solutions for eye care, ensuring safe and efficient patient care. It has two portals:
 - HealTheia **Provider:** Specialists manage their availability and handle patient appointment approvals.
 - HealTheia **Patient:** Patients can easily schedule appointments, manage prescriptions, and see their medical history via the app or website.
 - Worked as a **full-stack developer** with **Angular, MUI, PubNub, Node.js, and MongoDB**.
 - Implemented the **OpenTok** API for **video calls**, including a waiting room and prescription features.
 - Integrated **PubNub** for **chat** between doctors and patients' post-appointment.
- **Chalo:** India's leading Public Transportation Management system.
 - **TMTU System** manages the transportation network, including buses, routes, fares, and ticketing.
 - Zophop provides an admin interface for vehicle stats and live tracking on a map.
 - GPS **Dashboard** is an admin tool for tracking GPS devices and viewing statistics like data arrival times and parsing duration.

Worked as a front-end developer utilizing **Angular, D3.js, and Google Maps** to create a Seamless UI and integrate it with the backend APIs.
